

# Top 10 Best Practices for Today's Homebuilder

Learn the latest and greatest techniques  
being used today to build better homes.

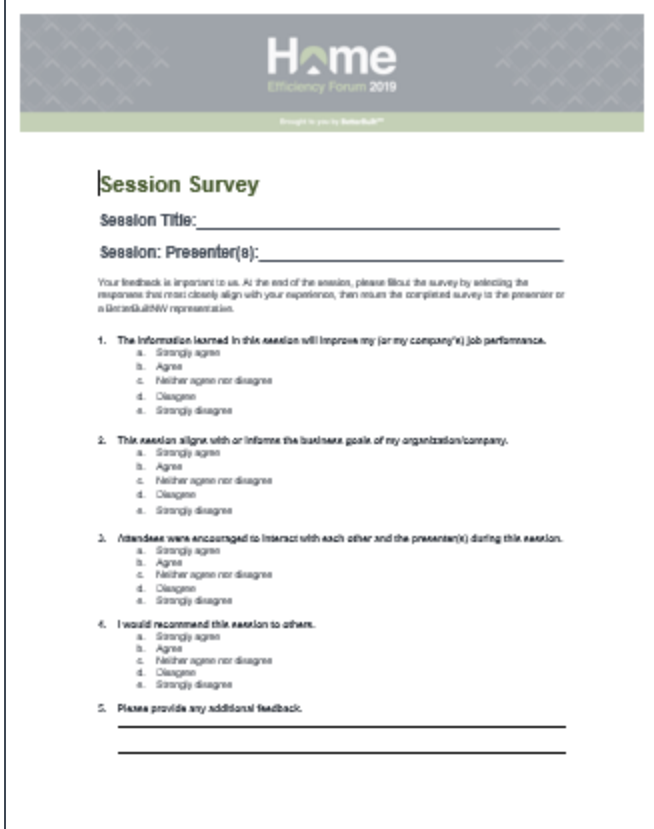

October 17, 2019

# Session Survey Instructions

At the end of each session, you will be given 5 minutes to complete the session survey.

- Complete the survey using the mobile app or paper versions
- Provide the paper surveys to the room moderator or to the BetterBuiltNW table
- We appreciate your feedback

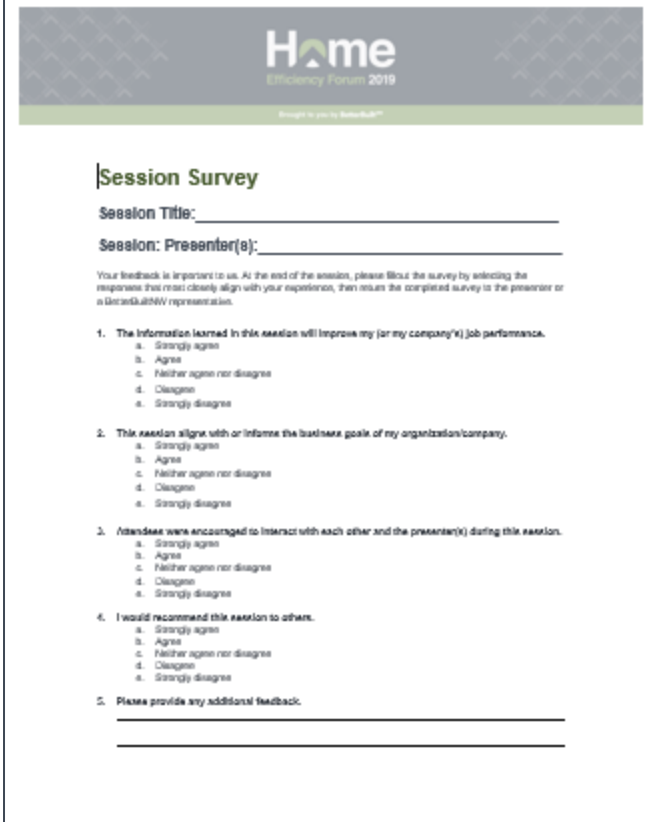

The screenshot shows a survey form titled "Home Efficiency Forum 2019" with the BetterBuiltNW logo. The survey is titled "Session Survey" and includes fields for "Session Title:" and "Session: Presenter(s):". Below these fields is a note: "Your feedback is important to us. At the end of the session, please fill out the survey by selecting the response that most closely aligns with your experience, then return the completed survey to the presenter or a BetterBuiltNW representative." The survey consists of five numbered questions, each with five response options (a-e):

1. The information learned in this session will improve my (or my company's) job performance.  
a. Strongly agree  
b. Agree  
c. Neither agree nor disagree  
d. Disagree  
e. Strongly disagree
2. This session aligns with or informs the business goals of my organization/company.  
a. Strongly agree  
b. Agree  
c. Neither agree nor disagree  
d. Disagree  
e. Strongly disagree
3. Attendees were encouraged to interact with each other and the presenter(s) during this session.  
a. Strongly agree  
b. Agree  
c. Neither agree nor disagree  
d. Disagree  
e. Strongly disagree
4. I would recommend this session to others.  
a. Strongly agree  
b. Agree  
c. Neither agree nor disagree  
d. Disagree  
e. Strongly disagree
5. Please provide any additional feedback.

# Call Backs & Liability

# Health & Indoor Air Quality

# Uncomfortable Customers

# High Energy Costs

# Affordability: Low Income

# Affordability: The Next Generation

A photograph of two construction workers on a building site. The worker on the left is wearing a white long-sleeved shirt, a white hard hat, and safety glasses, and is pointing towards the wooden framing of a building. The worker on the right is wearing a blue short-sleeved shirt, blue jeans, and a tool belt, and is looking in the same direction. The background shows the wooden skeleton of a building under construction against a clear blue sky. In the distance, a stone wall and snow-capped mountains are visible. An orange square is positioned to the left of the text overlay.

# Where's the Market Headed?

# U.S. Building Impact

**76%** Total U.S. electricity consumption

**40%** Energy use and carbon emissions

**By 2030**, building energy use could be cut more than 20% using technologies known to be cost effective today.

*Source: U.S. Department of Energy, 2015*

# Homebuyer Preference

81%

of people who expect to buy a new home in the next two years say higher energy efficiency would cause them to choose one new home over another.

*Source: Energy Pulse 2016 ©Shelton Communication Group, Inc.*

# The State of Green Building

## 2017 NAHB Green SmartMarket Report

The more green experience a builder has...

- the more they appreciate certifications,
- the easier they think it is to market green, and
- the less they perceive the incremental costs to be.

# Zero Energy Home

A home that generates as much energy on site as it uses over the course of a year.

# Policy Changes

# Benefits of Third Party Verification

# Builders & Third Party Verification

- 
- Quality Assurance
    - Third-party inspection and consulting
    - Performance testing
    - Risk management
    - Reduced callbacks
    - Better building product
    - Avoid embarrassment

# Builders & Third Party Verification

- Sales & Marketing Advantage
  - Differentiate your company from others
  - Understand and address younger consumers
  - Meet current/future market demand
- Business Evolution
  - Housing is changing
  - Manage the future
  - Technical assistance

The background of the slide is a photograph of a workshop or lumber yard. In the foreground, there are several stacks of cut lumber. On the left, a stack of thick, square timbers shows prominent wood grain and knots. To the right, there are stacks of thinner, rectangular planks. The background is slightly out of focus, showing more stacks of wood and possibly some structural elements of a building under construction. An orange L-shaped graphic element is positioned to the left of the text box.

# **Building Science Fundamentals**

# Building Science

Photo: Centra Windows

Building science studies the interactions of people, components and systems, and the physical phenomena affecting a building.

A photograph of two construction workers on a building site. They are standing on a concrete slab, looking at the wooden framing of a building. One worker, wearing a white hard hat and a light blue shirt, is pointing towards the upper part of the frame. The other worker, wearing a dark blue shirt and jeans with a tool belt, is looking in the same direction. The background shows a clear blue sky and some distant structures. An orange square is positioned to the left of the text box.

# Moisture Flows

# Moisture Flows: Moisture Movement

- Liquid water moves by gravity or pressure differences
- Liquid water moves by capillary action
- Water vapor is transported via air movement
- Water vapor diffuses through building assemblies

Rainfall

Capillary Action

Vapor

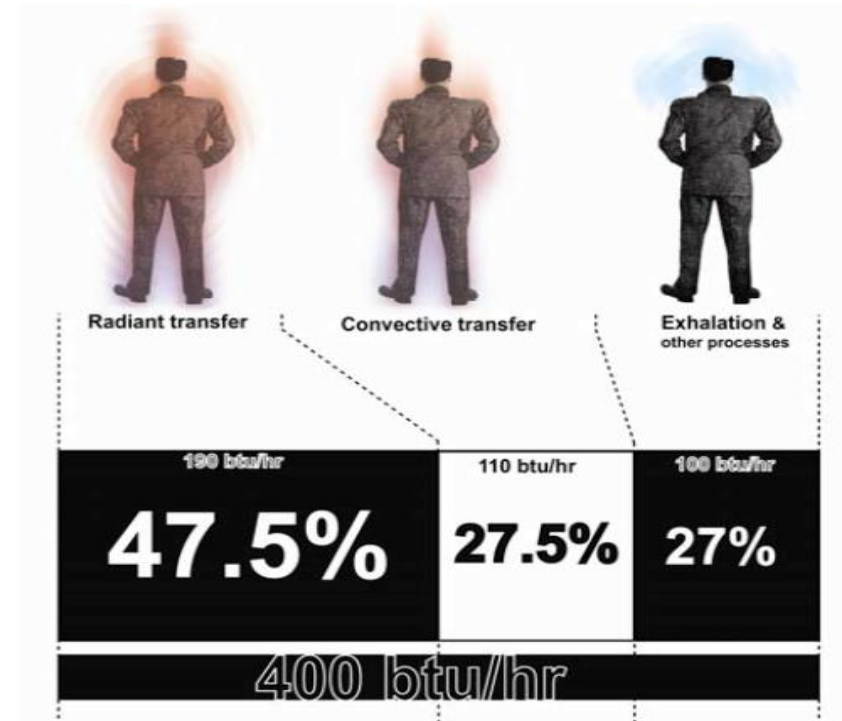

The background image shows the wooden skeleton of a building under construction. Sunlight filters through the beams, creating a pattern of light and shadow on the floor joists. An orange L-shaped graphic is positioned on the left side, partially overlapping a dark blue rectangular box that contains the word "Insulation" in white text.

# Insulation

# Thermal Flows (Heat Transfer)

Three Modes of Heat Transfer:

- Conduction
- Convection
- Radiation

# Top 10 Best Practices for Today's Homebuilder

1. Design
2. Superior Air Sealing
3. High-R Walls
4. High-R Ceilings
5. Windows
6. Ducts and Distribution
7. Fresh Air Ventilation
8. Appliances and Lighting
9. Mechanical Systems
10. Solar Energy

Good, Better, Best options will be provided for each approach

The background of the slide is a photograph of a workshop or lumber yard. In the foreground, there are several stacks of cut lumber. On the left, a stack of thick, square-sectioned wooden beams is visible, showing their natural wood grain and some knots. To the right, there are stacks of thinner, rectangular wooden planks. The background is slightly out of focus, showing more stacks of wood and the structure of a building under construction or a storage area. An orange L-shaped graphic element is positioned to the left of the text box.

# **1. Design for Efficiency**

# 1. Design for Efficiency

- **Good:** Continuous thermal boundary
- **Better:** Add right sizing design & systems
- **Best:** Add optimization with energy modeling

# Best: Optimize with Energy Modeling

Computerized analysis of:

- Heat loss
- Heat gain
- Air leakage
- Mechanical efficiency
- Assumes “typical” occupant behavior

Analyze measures:

- Select optimum package
- Customer needs
- Price point

**CONTACT YOUR RATER**

# Best: Optimize with Energy Modeling

## Shell measures

- Insulation
- Air sealing
- Windows

Minimum shell measures create a consistent interior temperature and durable building. They also create a minimum level of occupant comfort and reduce equipment size and cost.

## Equipment measures

- Heating/cooling efficiency
- Water heating efficiency
- Solar

The background of the slide is a photograph of a workshop or lumber yard. It shows several large stacks of light-colored wooden planks and beams. The wood grain is clearly visible on the ends of the boards. The lighting is bright, creating a warm, natural atmosphere. An orange L-shaped graphic element is positioned to the left of the text box.

## **2. Superior Air Sealing**

## 2. Superior Air Sealing

**Good:** Code level caulking and sealing

**Better:** Fully continuous air barrier

**Best:** Exterior sheathing sealed

# Air Leakage

- 30% of heat loss in “typical” home
- Transport moisture
- Reduce comfort
- Increase indoor pollution
- Largest cause of ice dams

# Continuous Air Barrier With Alignment

Photos Courtesy: Bruce Sullivan

# Exterior Air Barrier System

Exterior sheathing tape or glue sheathing to framing with construction adhesive.

## Membranes

Pro Clima

SIGA

# Aerobarrier

No more caulking needed to weatherize a space pre-drywall.  
AeroBarrier requires no manual labor to apply and removes any sealing guesswork.

*Source: Aerobarrier*

The background of the slide is a photograph of a workshop or lumber yard. In the foreground, there are several stacks of light-colored wooden planks, showing their grain and texture. In the background, more stacks of wood are visible, slightly out of focus. An orange L-shaped graphic element is positioned to the left of the text box.

## **3. High Performance Wall Systems**

### 3. High Performance Wall Systems

**Good:** Intermediate or advanced framing with blown insulation

**Better:** Single plate with staggered studs + blown insulation ( $\leq$  R-27) or 2x6 with exterior continuous insulation.

**Best:** Insulated sheathing or double-stud + blown insulation ( $>$  R-27)

# Wall Insulation up to R-27

**Staggered Stud Wall  
With 8" Plates**

Photo Courtesy: Bruce Sullivan

**2x6 Stud Wall With  
Exterior Rigid  
Insulation**

# Exterior Insulations

XPS – Extruded Polystyrene

EPS – Expanded Polystyrene

Rockwool Panels

Thermal Break Shearwall (TBS)

Polyisocyanurate – Foil Faced

# Wall Insulation above R-27

**Double Stud Wall**

**2x6 Stud Wall With  
Exterior Rigid Insulation**

# Double Stud Wall

Framing Thickness	R-Value
8"	28
10"	42
12"	50

The background of the slide is a photograph of a workshop or lumber yard. In the foreground, there are several stacks of light-colored wooden planks. The wood grain is clearly visible on the ends of the planks. In the background, more stacks of wood are visible, slightly out of focus. An orange L-shaped graphic element is positioned to the left of the text box.

## 4. High R-Value Ceilings

## 4. High R-Value Ceilings

**Good:** Standard truss with R-21 high density fiberglass batts or rigid insulation inserts + 1" vent channel at eaves

**Better:** Raised heel truss, parallel chord cantilevered truss

**Best:** True vaulted ceiling (I-joist) or insulated roof above attic

# Raised Heel Truss

# Parallel Chord or Scissors Truss

# I-Joists Vaulted

## 5. Windows

## 5. Windows

**Good:** Proper U-value and Solar Heat Gain Coefficient (SHGC) for applications

**Better:** Window design (avoid too much glazing)

**Best:** Daylighting + high performance low U-value

# Super-Low U-value & Daylighting

- U-0.09 to U-0.20
- Triple glazed
- Low-e
- Gas fill
- Double air seal

# Super-Low U-value & Daylighting

Most Windows on South Facing Walls

Design for light penetration

Limit Windows on North

Use light-colored interior finishes

Share light between spaces

The background of the slide is a photograph of a workshop or lumber yard. In the foreground, there are several stacks of light-colored wooden planks. The wood grain is clearly visible, showing concentric growth rings. In the background, more stacks of wood are visible, slightly out of focus. An orange L-shaped graphic element is positioned to the left of the text box.

## **6. Ducts and Distribution**

## 6. Ducts and Distribution

**Good:** Seal ducts with mastic

**Better:** Seal ducts with mastic and test

**Best:** Ducts inside or ductless system

# The Problems With Ducts

- Inadequate insulation
- Too much duct air leakage
- Pressure difference induced building leakage
- Ducts can be responsible for 20% of building heat loss.

Photo Courtesy: Bruce Sullivan

# Duct Seal and Test

- Test after top out is best for finding and sealing leaks
- HVAC installers that are experienced and confident can successfully test at finish

Photo Courtesy: Bruce Sullivan

# Ducts Inside

## Why?

- Temperature
- Condensation
- Leakage

## How?

- Design
- Dropped ceilings
- Soffits
- Interior walls
- Unvented crawls
- Conditioned attics

# How do you Bring Ducts Inside?

Move the ducts and  
air handler to  
conditioned space

and/or

Turn unconditioned  
space to conditioned  
space

# Two Story Home

# Make the Transition to Ducts Inside

- Research options
- Consult verifier
- Bring designer and HVAC in early
- Adapt stock plans over time
- Persist

The background of the slide is a photograph of a workshop or lumber yard. In the foreground, there are several stacks of cut lumber. On the left, a stack of thick, square-sectioned wooden beams is visible, showing their natural wood grain and some knots. To the right, there are stacks of thinner, rectangular wooden planks. The background is slightly out of focus, showing more stacks of wood and the structure of a building, possibly a warehouse or a construction site. The lighting is bright and even, highlighting the textures of the wood.

## **7. Fresh Air Ventilation**

# 7. Fresh Air Ventilation

**Good:** Exhaust only

**Better:** Supply + exhaust (w/ ECM blower motor)

**Best:** Heat Recovery Ventilator (HRV) or Energy Recovery Ventilator (ERV)

# Ventilation Strategies

## Heat Recovery Ventilator (HRV)

= sensible heat

## Energy Recovery Ventilator (ERV)

= sensible heat + moisture

# Through the Wall ERV

Lunos

# Equipment selection

Efficiency

Energy use (ECM)

Air flow rating

Freeze protection

Noise

Variable speed

Unit dimensions

Maintenance requirement

Options: filtration, controls, self-balancing

Zehnder

## **8. Lighting and Appliances**

## 8. Lighting and Appliances

**Good:** Energy Star appliances

**Better:** Add heat pump dryer

**Best:** Add induction cooktop

# Appliances

- Heat pump clothes dryers
- No vent needed

# Appliances

- Induction Cooktop

Photo Courtesy: Bruce Sullivan

The background of the slide is a photograph of a workshop or lumber yard. In the foreground, there are several stacks of cut lumber. On the left, a stack of thick, square-sectioned wooden beams is visible, showing their natural wood grain and some knots. To the right, there are stacks of thinner, rectangular wooden planks. The background is slightly out of focus, showing more stacks of wood and possibly some structural elements of a building under construction. An orange L-shaped graphic element is positioned to the left of the title box.

## 9. Mechanical Systems

## 9. Mechanical Systems

**Good:** High-efficiency ducted heat pump or condensing gas furnace

**Better:** Ductless heat pump or Highest efficiency condensing gas furnace.

**Best:** Add heat pump water heater or condensing tankless gas water heater

# System Types – High Efficiency

## Refrigerant Cycle Systems

Air Source Heat Pumps – Use the ambient air as the source or sink for heat

Hybrid Heat Pumps – system above with high efficiency gas furnace for backup heat

## Seasonal Energy Efficiency Ratio (SEER)

- Btus ÷ Watts
- Standard conditions  
(outdoor: 95°F, 50% RH, indoor: 80°F, 50% RH )

## Heating Season Performance Factor (HSPF)

- Btus ÷ KWh
- Range of conditions, including cycling

# HSPF 9 – 13.5

# System Types – High Efficiency

Condensing Gas Furnace

**AFUE: 90-93%**

# System Types – High Efficiency

Condensing Gas Furnace

**AFUE: 94-99%**

# System Types – Ductless Heat Pump

# Heat Pump Water Heater

- High efficiency
- Locate in buffered space
- Troubled history

# Condensing On-Demand Water Heater

Best

- High efficiency
- Natural Gas or LPG

# CO2 Heat Pump Water Heater

- Energy factor: 3.35 (at 67.5° F ambient)
- Northern climate energy factor: 3.2
- First-hour rating: 97.8 gallons
- Number of consecutive 16-gallon efficient showers: 7.5
- Sound level of outside unit: 48 dBA

The background of the slide is a photograph of a workshop or lumber yard. In the foreground, there are several stacks of light-colored wooden planks, showing their grain and texture. In the background, more stacks of wood are visible, slightly out of focus. A semi-transparent dark blue rectangle is overlaid on the right side of the image, and an orange L-shaped graphic element is on the left side of the text box.

## 10. Solar Electric

# 10. Solar Electric

**Good:** Solar PV and Electric Vehicle (EV) ready

**Better:** Zero Energy (ZE Ready)

**Best:** Positive Energy with EV

# Solar PV Ready

**Solar Roof Area must utilize 80% or more of solar resource available (TSRF) OR Prescriptive Path**

# Solar PV Ready

# Electric Vehicle Ready

Space in the breaker panel to accommodate a dedicated 240v circuit

# Zero Energy (ZE Ready)

# Evolution in Zero Energy

## Early Adopters

Custom luxury homes

## 2nd Wave

Affordable & Multifamily

## 3rd Wave (Present)

Spec & Productions builders

# Buying Power of Zero Energy Construction

- ▶ \$10 / month in energy savings buys \$2000 more house or at least \$2000 more mortgage
- ▶ Owners can easily save \$100 per month on energy costs which would allow \$20,000 higher mortgage with no impact to the owner's month budget
- ▶ Size reduction can free up additional funds. If construction costs are 200/sf, then reducing size from 2400 to 2000 sf yields \$80,000.

## Rater Field Checklist

ENERGY STAR Certified Homes, Version 3 / 3.1 (Rev. 08)

Home Address: _____	City: _____	State: _____	Permit Date: _____	
Thermal Enclosure System	Must Correct	Builder Verified <sup>1</sup>	Rater Verified <sup>2</sup>	N/A <sup>3</sup>
<b>1. High-Performance Fenestration &amp; Insulation</b>				
1.1 Fenestration meets or exceeds levels specified in Item 2.1 of the Rater Design Review Checklist	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	-
1.2 Insulation meets or exceeds levels specified in Item 3.1 of the Rater Design Review Checklist	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	-
1.3 All insulation achieves RESNET-defined Grade I installation. See Footnote 4 for alternatives. <sup>4</sup>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	-
<b>2. Fully-Aligned Air Barriers<sup>5</sup></b> At each insulated location below, a complete air barrier is provided that is fully aligned as follows:				
<b>Ceilings:</b> At interior or exterior horizontal surface of ceiling insulation in Climate Zones 1-3; at interior horizontal surface of ceiling insulation in Climate Zones 4-8. Also, at exterior vertical surface of ceiling insulation in all climate zones (e.g., using a wind baffle that extends to the full height of the insulation in every bay or a tabbed baffle in each bay with a soffit vent that prevents wind washing in adjacent bays). <sup>6</sup>				
2.1 Dropped ceilings / soffits below unconditioned attics, and all other ceilings	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>Walls:</b> At exterior vertical surface of wall insulation in all climate zones; also at interior vertical surface of wall insulation in Climate Zones 4-8. <sup>7</sup>				
2.2 Walls behind showers, tubs, staircases, and fireplaces	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
2.3 Attic knee walls and skylight shaft walls <sup>8</sup>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
2.4 Walls adjoining porch roofs or garages	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
2.5 Double-walls and all other exterior walls	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	-
<b>Floors:</b> At exterior vertical surface of floor insulation in all climate zones and, if over unconditioned space, also at interior horizontal surface including supports to ensure alignment. See Footnotes 10 & 11 for alternatives. <sup>9, 10, 11</sup>				
2.6 Floors above garages, floors above unconditioned basements or crawlspaces, and cantilevered floors	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
2.7 All other floors adjoining unconditioned space (e.g., rim / band joists at exterior wall or at porch roof)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>3. Reduced Thermal Bridging</b>				
3.1 For insulated ceilings with attic space above (i.e., non-cathedralized), Grade I insulation extends to the inside face of the exterior wall below and is $\geq$ R-21 in CZ 1-5; $\geq$ R-30 in CZ 6-8. <sup>12</sup>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
3.2 For slabs on grade in CZ 4-8, 100% of slab edge insulated to $\geq$ R-5 at the depth specified by the 2009 IECC and aligned with the thermal boundary of the walls. <sup>13, 14</sup>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
3.3 Insulation beneath attic platforms (e.g., HVAC platforms, walkways) $\geq$ R-21 in CZ 1-5; $\geq$ R-30 in CZ 6-8	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
3.4 At above-grade walls separating conditioned from unconditioned space, one of the following options used (rim / band joists exempted): <sup>15</sup>				
3.4.1 Continuous rigid insulation, insulated siding, or combination of the two is: $\geq$ R-3 in CZ 1-4; $\geq$ R-5 in CZ 5-8. <sup>16, 17, 18</sup> <b>OR</b> ;	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
3.4.2 Structural Insulated Panels <b>OR</b> ; Insulated Concrete Forms <b>OR</b> ; Double-wall framing <b>OR</b> ; <sup>16, 19</sup>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
3.4.3 Advanced framing, including all of the items below: <sup>20</sup>				
3.4.3a Corners insulated $\geq$ R-6 to edge. <sup>21</sup> <b>AND</b> ;	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
3.4.3b Headers above windows & doors insulated $\geq$ R-3 for 2x4 framing or equivalent cavity width, and $\geq$ R-5 for all other assemblies (e.g., with 2x6 framing). <sup>22</sup> <b>AND</b> ;	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
3.4.3c Framing limited at all windows & doors to one pair of king studs, plus one pair of jack studs per window opening to support the header and sill, <b>AND</b> ;	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
3.4.3d Interior / exterior wall intersections insulated to same R-value as rest of exterior wall, <sup>23</sup> <b>AND</b> ;	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
3.4.3e Minimum stud spacing of 16 in. o.c. for 2x4 framing in all Climate Zones and, in CZ 6-8, 24 in. o.c. for 2x6 framing. <sup>24</sup>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>4. Air Sealing (Unless otherwise noted below, "sealed" indicates the use of caulk, foam, or equivalent material)</b>				

[www.energystar.gov/newhomes/homes\\_prog\\_reqs/national\\_page](http://www.energystar.gov/newhomes/homes_prog_reqs/national_page)

# Quality Construction Chain

1. Each person must check upstream work before beginning
2. Each person must know how to do their work
3. Each person must know that all critical details are done defect free
4. Each person must check their own critical work details

*Source: Advanced Energy*

# Quality Assurance

What does the rater verify?

- Performance testing
  - Duct air leakage
  - Building air leakage
  - Ventilation performance
- Insulation level and placement
- Air sealing details
- Durability details
- Ventilation operation
- HVAC system sizing

A photograph of two construction workers on a building site. The worker on the left is wearing a white long-sleeved shirt, a white hard hat, and safety glasses, and is pointing towards the wooden framing of a building. The worker on the right is wearing a blue short-sleeved shirt, blue jeans, and a tool belt, and is looking in the same direction. The background shows the wooden skeleton of a building under construction against a clear blue sky. In the foreground, there is a concrete floor with some wooden planks and debris. A large, semi-transparent dark gray rectangle with an orange L-shaped graphic on its top-left corner is overlaid on the image, containing the text "Where To Go for Support".

# Where To Go for Support

The resources you need to

# **Build** Energy-Efficient Homes
